

The impact of TMDL nutrient reductions on dissolved oxygen in the Chesapeake Bay: a comparison of academic and regulatory water quality models.

-

Isaac (Ike) Irby, PhD/MPP Candidate
Advisor: Marjorie Friedrichs

Coastal Ocean Modeling Testbed: Chesapeake Bay Estuarine Hypoxia
Chesapeake Bay Program: Modeling Group

2010 Chesapeake Bay TMDL

- **Goals for Nitrogen Reduction**
 - Cap of 186 million lbs of nitrogen per year
 - 25% reduction in nitrogen delivery

2010 Chesapeake Bay TMDL

- Goals for Nitrogen Reduction
 - Cap of 186 million lbs of nitrogen per year
 - 25% reduction in nitrogen delivery
- Hydrologic Period

2010 Chesapeake Bay TMDL

- Goals for Nitrogen Reduction
 - Cap of 186 million lbs of nitrogen per year
 - 25% reduction in nitrogen delivery
- Hydrologic Period

2010 Chesapeake Bay TMDL

- Goals for Nitrogen Reduction
 - Cap of 186 million lbs of nitrogen per year
 - 25% reduction in nitrogen delivery
- Hydrologic Period
 - 1991 – 2000

2010 Chesapeake Bay TMDL

- Goals for Nitrogen Reduction
 - Cap of 186 million lbs of nitrogen per year
 - 25% reduction in nitrogen delivery
- Hydrologic Period
 - 1991 – 2000

- Critical Period
 - 1993 – 1995

Nutrient Reduction Scenario

Nutrient Reduction Scenario

Mean decrease in nitrogen: ~30%

How do nutrient reductions impact dissolved oxygen concentrations?

Bottom Dissolved Oxygen - 1993 1 1

Nutrient Reduction Scenario

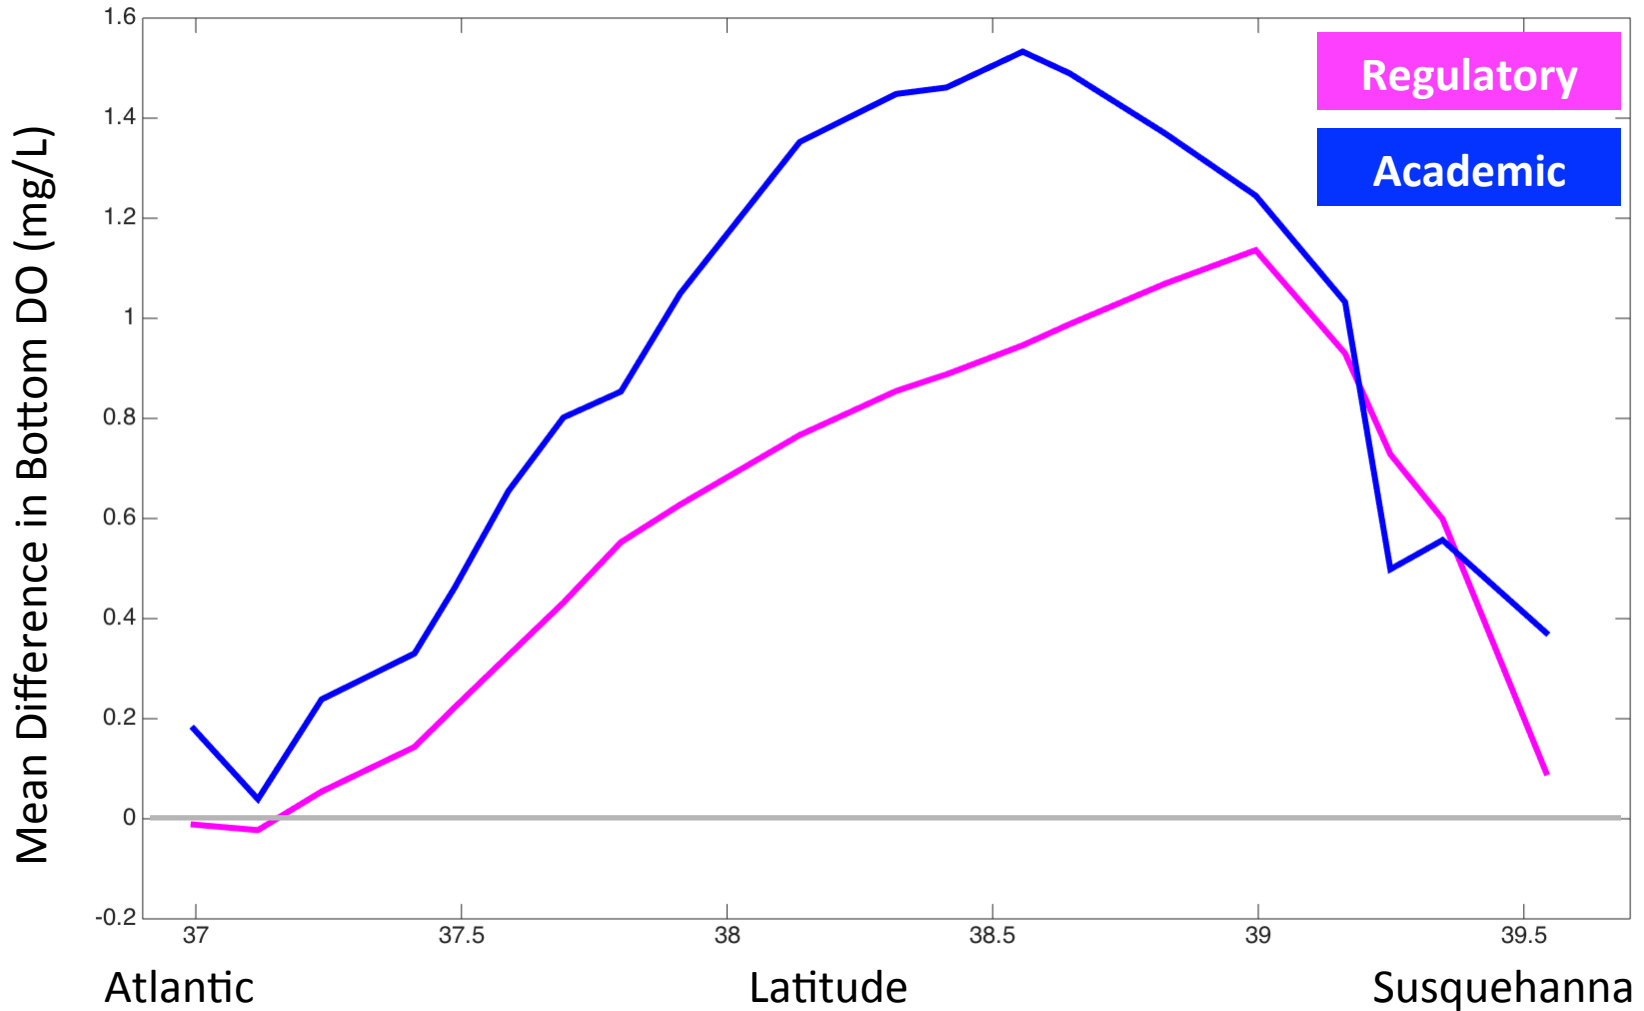

Nutrient Reduction Scenario

Average DO increase: 0.95 mg/L 1.53 mg/L

Nutrient Reduction Scenario

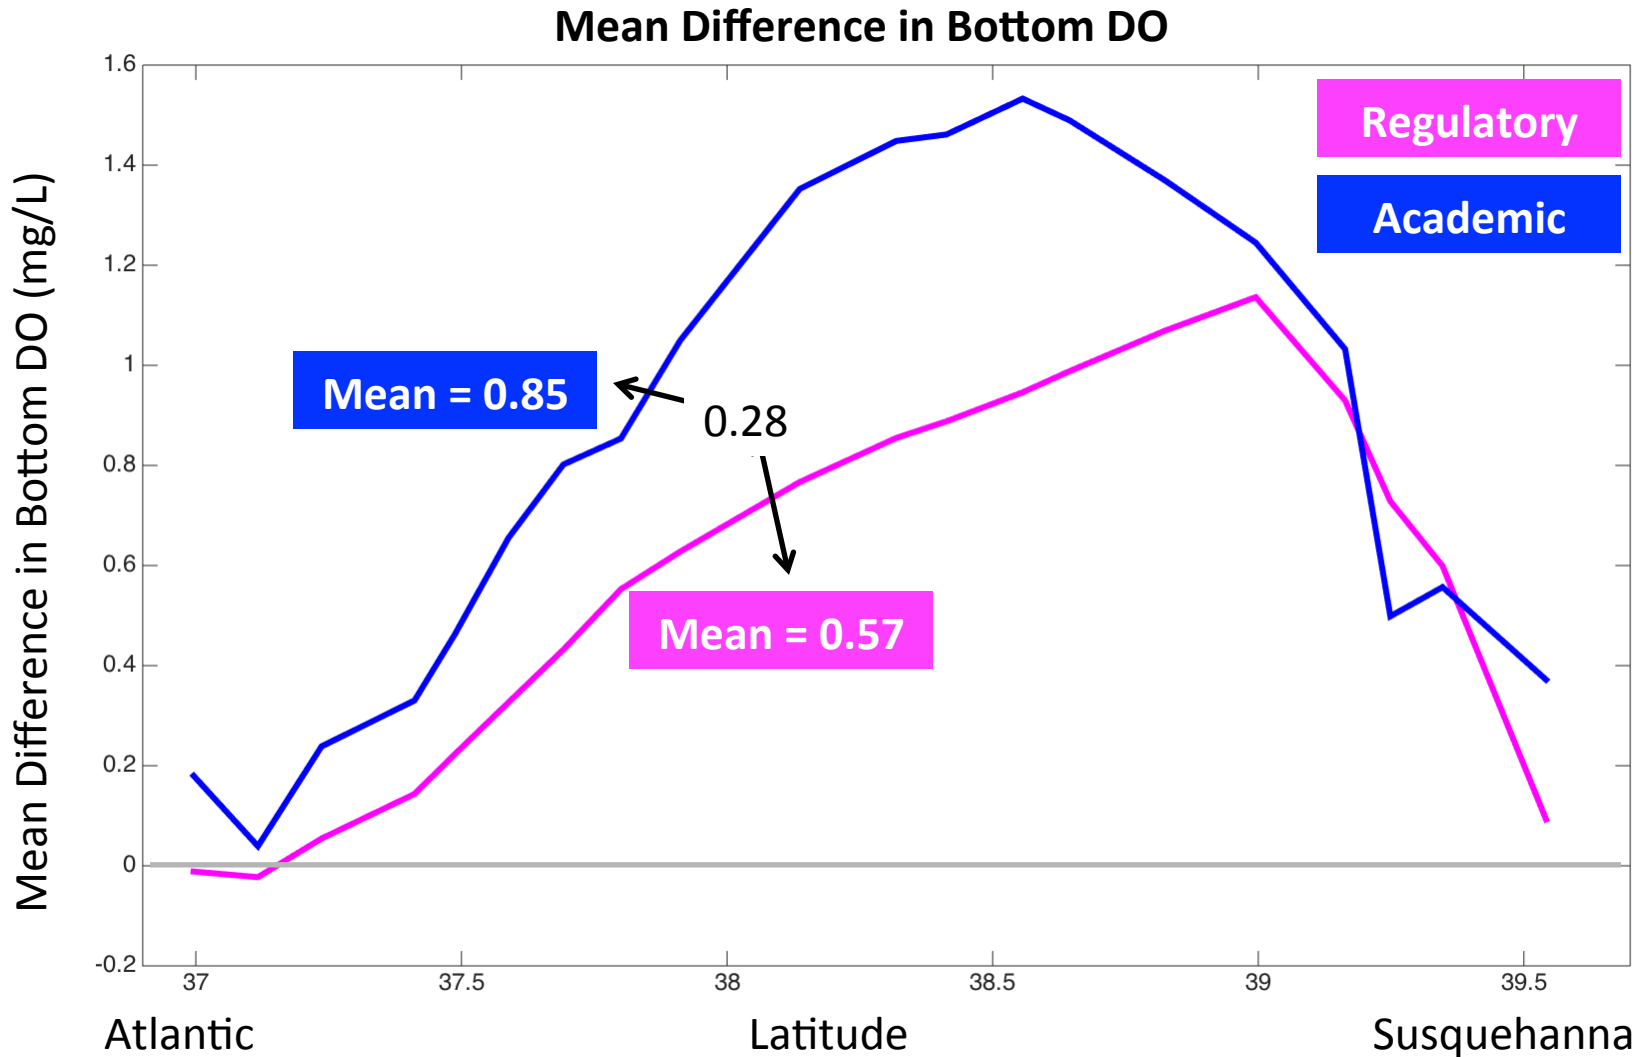

Mean Difference in Bottom DO

Nutrient Reduction Scenario

Nutrient Reduction Scenario

Surface Dissolved Oxygen

- 1993 1 1

Surface Dissolved Oxygen

- 1993 1 1

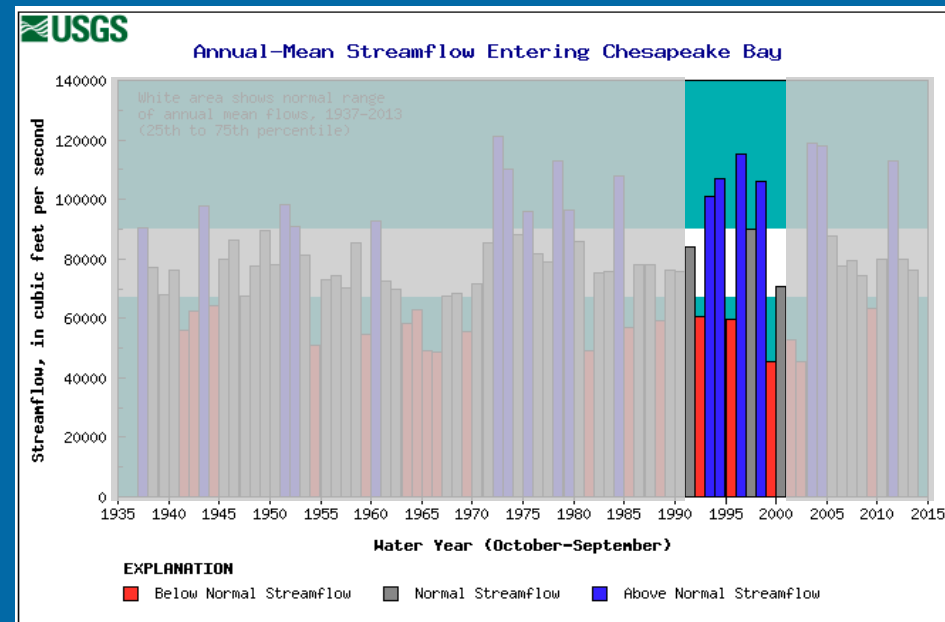

Conclusions

- Both models generally react to nutrient reductions similarly
 - Bottom DO is elevated and low-oxygen conditions are greatly reduced
 - Surface DO is generally decreased
- Academic model tends to be slightly more sensitive to nutrient reductions
 - Particularly in mid-Bay

Future Work

- Apply regulatory water quality standard assessment
 - Compare levels of attainment as a result of nutrient reductions for both models
 - Examine impact of critical period

Future Work

- Apply regulatory water quality standard assessment
 - Compare levels of attainment as a result of nutrient reductions for both models
 - Examine impact of critical period
- Assess impact of climate change on efforts to increase water quality via nutrient reductions
